ABOUT THE CENTER FOR INTERNATIONAL BUSINESS CYCLE RESEARCH

The Center for International Business Cycle Research, established in 1979, specializes in the study of trends and fluctuations in economic growth and inflation in the United States and other countries. The data contained in this publication are the result of its ongoing research programs on international business cycles. Readers are invited to submit comments and suggestions concerning this publication. In addition, readers wishing to secure historical data for the series shown may do so by communicating with:

Jean L. Maltz, Center for International Business Cycle Research,
808 Uris Hall, Columbia University, New York, NY 10027. Telephone: (212) 280-2916

ABOUT THIS REPORT

INTERNATIONAL ECONOMIC INDICATORS (IEI) provides a monthly look at 130 economic time series covering the seven major industrial countries (forty of these series are unavailable in any other source).

The basic research underlying the compilation began in 1974, under the direction of Dr. Geoffrey H. Moore and Dr. Philip A. Klein, following the methodology for selecting and evaluating indicators for the U.S. economy (published by the U.S. Department of Commerce in Business Conditions Digest). Additional indicators and other countries will be included in the compilation as the Center's research program develops.

The dominant feature of IEI is the composite indexes section, in which leading and coincident cyclical indexes are presented for the seven major industrial countries and for groups of countries. Studies by the Center have shown the usefulness of these cyclical indexes for forecasting, measuring and interpreting short-term fluctuations in aggregate economic activity, inflation, employment and foreign trade flows. Cyclical indicators are economic time series which have been identified as leaders, coinciders, or laggards based on their general conformity to cyclical movements in aggregate economic activity.

ORDER FORM

Please enter my subscription for the publications checked below:

INTERNATIONAL ECONOMIC INDICATORS (IEI)

- ☐ Corporate @ \$300/year (U.S. and Canada)
☐ Foreign @ \$350/year (includes air mail)
☐ University or Public Libraries
☐ monthly @ \$150/year

IEI HISTORICAL DATA*

- ☐ Printout, all series and indexes, \$150
☐ Printout, indexes only, \$50
☐ Magnetic Tape (9 Track), all series and indexes, \$150

*Add \$30 for foreign airmail

IEIDATA is also available, on-line, through Haver Analytics time-sharing service. For more information, contact Haver Analytics, 420 Lexington Avenue, Suite 2113, New York, N.Y. 10017 (212) 986-9300.

New Features and Changes for This Issue
Summary of Current Leading and Coincident Indexes

PART I
COMPOSITE INDEXES

Leading Indexes, seven countries (Table 1).....	1
Coincident Indexes, seven countries (Table 2).....	3
Charts of Indexes and Growth Rates, 1973-83	5-15

PART II
COMPONENTS OF COMPOSITE INDEXES

Charts of leading series, 1979-83 , seven countries.....	16-21
Charts of coincident series, 1979-83 , seven countries.....	22-26
United States (12 leading, 6 coincident series).....	27
Canada (12 leading, 6 coincident series).....	31
United Kingdom (12 leading, 6 coincident series).....	35
West Germany (10 leading, 7 coincident series).....	39
France (8 leading, 5 coincident series).....	43
Italy (6 leading, 5 coincident series).....	47
Japan (10 leading, 6 coincident series).....	51

PART III
MULTICOUNTRY COMPOSITE INDEXES

Four European countries (36 leading, 23 coincident series).....	57,59
Six countries excl. U.S. (58 leading, 35 coincident series).....	57,59
Seven countries (70 leading, 41 coincident series).....	57,59

PART IV APPENDIXES (June & December issues)

- A. Growth cycle peak and trough dates, 13 countries
- B. Median leads and lags of individual indicator at growth cycle turning points, 10 countries
- C. Median leads and lags of composite indexes at growth cycle turning points, 7 countries
- D. How to read the IEI printouts for each country

NEW FEATURES AND CHANGES FOR THIS ISSUE

Changes are made from time to time in IEI to incorporate recent findings of the Center's international business cycle research, newly available series, and revisions made by source agencies of the Center. These changes may result in revisions of data, additions or deletions of series, changes in the composition of indexes, etc.

Changes in this issue are as follows:

United Kingdom, Basic Materials Price Index, 1975=100, has been revised beginning 1957. It is computed now to match the 1980 version of the Standard Industrial Classification.

Note: All series are adjusted for seasonal variations unless designated NSA. Series designated quarterly (Q) are interpolated monthly with the quarterly figure placed at the mid-month of the quarter.

November 1983

THE LATEST READING ON THE INTERNATIONAL INDICATORS

SUMMARY: The leading business cycle indexes for six of the seven major industrial countries--all except the United Kingdom--continue to signal growth ahead. Confirming upswings in the indexes of economic performance, which measure output, employment, income and sales, are clearly underway in the United States, Canada, Japan and France. Sluggishness prevails in the performance indexes for West Germany, the United Kingdom and Italy.

	Ten-year Growth Rate 1966-76	Indexes of Economic Performance Growth Rates*			Leading Business Cycle Indexes Growth Rates*			Current Reading on the Cycle	Latest Month Covered
		6 mos. ago	3 mos. ago	Latest month	6 mos. ago	3 mos. ago	Latest month		
		-----annual rates, percent-----							
United States	3	0	7	10	10	19	17	Strong expansion continuing	Sept.
Canada	5	-1	3	5	13	16	10	Strong expansion continuing	Aug.
Japan	8	0	0	3	-5	5	11	Recovery underway	Aug.
United Kingdom	2	1	1	0	4	3	0	Economy sluggish	Aug.
West Germany	4	-1	1	0	6	9	7	Leaders advancing sharply; economy sluggish	Aug.
France	5	1	2	3	9	9	11	Recovery underway	Aug.
Italy	4	-4	-3	-3	1	5	6	Leaders strong; economy weak	May
7 countries	4	-1	3	5	4	12	12	Recovery continuing	Aug.
6 countries excl. U.S.	5	0	1	2	3	7	8	Recovery getting underway	Aug.
4 European countries	4	0	0	0	6	7	7	Contraction stopped; leaders advancing	Aug.

*Annual rate based on ratio of current month's index to average index over the preceding 12 months.

ABOUT THE CENTER FOR INTERNATIONAL BUSINESS CYCLE RESEARCH

The Center for International Business Cycle Research, established in 1979, specializes in the study of trends and fluctuations in economic growth and inflation in the United States and other countries. The data contained in this publication are the result of its ongoing research programs on international business cycles. Readers are invited to submit comments and suggestions concerning this publication. In addition, readers wishing to secure historical data for the series shown may do so by communicating with:

Jean L. Maltz, Center for International Business Cycle Research,
808 Uris Hall, Columbia University, New York, NY 10027. Telephone: (212) 280-2916

ABOUT THIS REPORT

INTERNATIONAL ECONOMIC INDICATORS (IEI) provides a monthly look at 130 economic time series covering the seven major industrial countries (forty of these series are unavailable in any other source).

The basic research underlying the compilation began in 1974, under the direction of Dr. Geoffrey H. Moore and Dr. Philip A. Klein, following the methodology for selecting and evaluating indicators for the U.S. economy (published by the U.S. Department of Commerce in Business Conditions Digest). Additional indicators and other countries will be included in the compilation as the Center's research program develops.

The dominant feature of IEI is the composite indexes section, in which leading and coincident cyclical indexes are presented for the seven major industrial countries and for groups of countries. Studies by the Center have shown the usefulness of these cyclical indexes for forecasting, measuring and interpreting short-term fluctuations in aggregate economic activity, inflation, employment and foreign trade flows. Cyclical indicators are economic time series which have been identified as leaders, coinciders, or laggards based on their general conformity to cyclical movements in aggregate economic activity.

ORDER FORM

Please enter my subscription for the publications checked below:

INTERNATIONAL ECONOMIC

INDICATORS (IEI)

- ☐ Corporate @ \$300/year (U.S. and Canada)
- ☐ Foreign @ \$350/year (includes air mail)
- University or Public Libraries
- ☐ monthly @ \$150/year

IEI HISTORICAL DATA*

- ☐ Printout, all series and indexes, \$150
- ☐ Printout, indexes only, \$50
- ☐ Magnetic Tape (9 Track), all series and indexes, \$150

*Add \$30 for foreign airmail

IEIDATA is also available, on-line, through Haver Analytics time-sharing service. For more information, contact Haver Analytics, 420 Lexington Avenue, Suite 2113, New York, N.Y. 10017 (212) 986-9300.

New Features and Changes for This Issue
Summary of Current Leading and Coincident Indexes

PART I
COMPOSITE INDEXES

Leading Indexes, seven countries (Table 1).....	1
Coincident Indexes, seven countries (Table 2).....	3
Charts of Indexes and Growth Rates, 1973-83	5-15

PART II
COMPONENTS OF COMPOSITE INDEXES

Charts of leading series, 1979-83 , seven countries.....	16-21
Charts of coincident series, 1979-83 , seven countries.....	22-26

United States (12 leading, 6 coincident series).....	27
Canada (12 leading, 6 coincident series).....	31
United Kingdom (12 leading, 6 coincident series).....	35
West Germany (10 leading, 7 coincident series).....	39
France (8 leading, 5 coincident series).....	43
Italy (6 leading, 5 coincident series).....	47
Japan (10 leading, 6 coincident series).....	51

PART III
MULTICOUNTRY COMPOSITE INDEXES

Four European countries (36 leading, 23 coincident series).....	57,59
Six countries excl. U.S. (58 leading, 35 coincident series).....	57,59
Seven countries (70 leading, 41 coincident series).....	57,59

PART IV APPENDIXES (June & December issues)

- A. Growth cycle peak and trough dates, 13 countries
- B. Median leads and lags of individual indicator at growth cycle turning points, 10 countries
- C. Median leads and lags of composite indexes at growth cycle turning points, 7 countries
- D. How to read the IEI printouts for each country

NEW FEATURES AND CHANGES FOR THIS ISSUE

Changes are made from time to time in IEI to incorporate recent findings of the Center's international business cycle research, newly available series, and revisions made by source agencies of the Center. These changes may result in revisions of data, additions or deletions of series, changes in the composition of indexes, etc.

Changes in this issue are as follows:

United Kingdom - Change in Stocks and Work in Progress, Personal Disposable Income, and Gross Domestic Product are now shown in millions of 1980 Pounds instead of millions of 1975 Pounds.

Note: All series are adjusted for seasonal variations unless designated NSA. Series designated quarterly (Q) are interpolated monthly with the quarterly figure placed at the mid-month of the quarter.

December 1983

THE LATEST READING ON THE INTERNATIONAL INDICATORS

SUMMARY: The leading business cycle indexes are rising at double-digit rates in Canada, the United States, Japan and France. More modest growth rates rule the leading indexes for West Germany, Italy and the United Kingdom. In all seven major industrial countries, however, the latest growth rates exceed the 1966-1976 trend rates. The economic performance indexes are advancing sharply in the U.S. and Canada, more slowly elsewhere.

	Ten-year Growth Rate 1966-76	Indexes of Economic Performance Growth Rates*			Leading Business Cycle Indexes Growth Rates*			Current Reading on the Cycle	Latest Month Covered
		6 mos. ago	3 mos. ago	Latest month	6 mos. ago	3 mos. ago	Latest month		
		—annual rates, percent—							
United States	3	2	8	11	13	19	16	Strong expansion continuing	Oct.
Canada	3	0	5	7	13	13	19	Strong expansion continuing	Sept.
Japan	8	0	1	3	-1	9	13	Recovery underway	Sept.
United Kingdom	2	1	0	1	5	4	3	Leaders advancing; economy sluggish	Sept.
West Germany	4	0	2	1	7	8	8	Leaders advancing sharply; economy sluggish	Sept.
France	5	2	1	3	8	8	13	Recovery underway	Sept.
Italy	4	-5	-6	-1	3	7	5	Leaders advancing; economy weak	July/June
7 countries	4	0	4	6	7	13	14	Recovery continuing	Sept.
6 countries excl. U.S.	5	0	1	2	5	8	11	Recovery continuing	Sept.
4 European countries	4	0	0	1	7	7	8	Recovery getting underway	Sept.

*Annual rate based on ratio of current month's index to average index over the preceding 12 months.

APPENDIXES

UNDERSTANDING GROWTH CYCLES
and their TURNING POINTS

The historical growth cycle turning points for the thirteen countries, shown on the facing page, have been designated by the Center for International Business Cycle Research (CIBCR). They mark the approximate dates when aggregate economic activity was farthest above its long-run trend level (peak) or farthest below its long-run trend level (trough). Growth cycle turning points are not to be confused with business cycle turning points, which mark the dates when the actual 'level' of economic activity reached a peak or trough, regardless of the long run trend.

These historical growth cycle turning dates are subject to periodic review by CIBCR and on occasion are changed as a result of significant revisions in the economic time series used in their determination. The dates shown in this publication are based upon a 1982 review. The absence of a recent turning date, however, does not necessarily mean that one has not occurred, since dates for some countries are not kept up to date on a regular basis.

Growth cycle chronologies are important for two basic reasons. First, growth cycle peaks tend to precede business cycle peaks while their troughs tend to be coincident with business cycle troughs. Thus, growth cycle analysis offers an "early warning system" for cyclical episodes which ultimately may become actual recessions. Second, growth cycle analysis provides a means of identifying mild setbacks in economic activity which do not actually become declines in the level of activity but merely declines in its rate of growth. As a result, there are usually more growth cycles than business cycles in a given country.

In dating growth cycles, selection of turning points is based upon visually inspected computer selected turns in a variety of economic series. The methodology for turning point selection, as described here briefly, involves the following basic steps:

1. Coincident series such as industrial production, GNP, personal income, employment and retail sales are first deflated, seasonally adjusted and their trend removed.
2. For each of these series final computer selected turning points are then derived from the deviations of the seasonally adjusted data from the final trend.^{1/}
3. These computer selected turning points in the deviations are then visually inspected and in some cases amended if, for example, the cycle involves too small an amplitude, or if there were identifiable 'exogenous' factors upsetting the cycle.
4. Median dates of peaks (or of troughs) of all the coincident series considered above are then computed.
5. These median dates are then compared with the turning points in the composite coincident index, and a decision made on the final growth cycle dates.

^{1/} For a description of the trend-fitting procedure see "The Phase-Average Trend: A New Way of Measuring Economic Growth", Charlotte Boschan, Walter W. Ebanks, Proceedings of the Business and Economics Statistics Section, American Statistical Review, 1978, p. 332.

IV. APPENDIX D

HOW TO READ THE IEI COMPUTER PRINTOUT

The printouts contain the leading and coincident composite indexes and the component indicators by months, for the United States, Canada, United Kingdom, West Germany, France, Italy and Japan. In addition, composite indexes are shown for the four European countries combined, the six countries excluding the United States, and the seven countries, all weighted by the respective countries' GNP in current U.S. dollars in 1970. The method used in constructing the indexes corresponds to that used by the U.S. Department of Commerce in Business Conditions Digest, with some differences in the method of amplitude and trend adjustment as described below.

Successive monthly issues of the printout will incorporate all revisions in the individual indicators and composite indexes during the period covered by the printout. Historical monthly and quarterly data extending as far back as data have been assembled (but not before January 1948) are available on magnetic tape or historical printouts. Users concerned about revisions in the indicators and the composite indexes prior to the data covered by the monthly IEI may order the latest version of the historical tape and/or historical printouts at any time.

The starting dates for the composite indexes are as follows:

	<u>Leading</u>	<u>Coincident</u>
United States	January 1948	January 1948
Canada	" 1948	" 1948
United Kingdom	" 1955	" 1952
West Germany	" 1957	" 1950
France	" 1955	" 1955
Italy	" 1955	" 1956
Japan	" 1953	" 1954
4 European countries	" 1955	" 1955
6 countries excl. U.S.	" 1955	" 1955
7 countries	" 1955	" 1955

The first page for each country gives a summary table of recent month-to-month changes in each indicator and in the composite indexes. The changes are in standardized form, that is, the changes are divided by the average change without regard to sign over a fixed period from the beginning of the series through 1981. The percentage changes are not computed in the usual fashion, with the initial figure as the base, but rather the base is the average of the two adjacent figures. That is, $(a_2 - a_1) \div (a_1 + a_2) / 2 \times 100$. This has the effect of equalizing the range of percentage increases and percentage decreases (the limits are +200 and -200) so that they may be averaged without the upward bias that applies to the usual percentage changes.

Starting at the top of each country's printout the country is identified followed by the title of the composite index. The word "deflated" in the title signifies that each of the component indicators that represents an aggregate value has been deflated by an appropriate price index.

Each of the component series is listed separately. A brief title of the series is given, together with the unit, whether it is monthly (M) or quarterly (Q), and whether it is treated invertedly. In the case of bankruptcies, for example, an increase is treated as a decline and vice versa (see below). Quarterly series are interpolated to obtain monthly values, with the quarterly figure centered in the middle month of the quarter. All series are used in seasonally adjusted form unless otherwise specified after the title (NSA = not seasonally adjusted). Annual averages are computed from seasonally adjusted data and hence may not correspond to those published in the source, which are usually based upon raw data. Also, for quarterly series out annual averages are computed from monthly interpolations rather than from the quarterly figures.

The "average weighted changes" are the means for each month of the standardized percent changes (or differences) for all the series listed. The weights in this instance are unity, but standardization is, of course, itself a form of weighting. Its purpose is to equalize the month-to-month variations in the different series so that those that move in wide swings do not have a larger influence on the average than those that have a smaller amplitude of variation.

"Standardized average weighted changes" are the average changes divided first by a standardization factor, namely the "average change without regard to sign" and then by a "weight applied." The first divisor is designed to adjust the "average weighted changes" so that they will average unity. The divisor is computed for a fixed period, January 1953 to November 1975. The second divisor is designed to make the average of the final standardized changes equal to the average percent change in the industrial production index in the country concerned (the latter average is the reciprocal of the "weight applied" figure). In this way both the leading and coincident indexes for a given country have the same average percent change, equal to that of industrial production in that country. The second step in the procedure seemed preferable to the alternative of letting the indexes for all countries have the same average percent change, namely unity. Using industrial production as the standard also seemed preferable to using real GNP for this purpose, since industrial production typically has a larger cyclical amplitude than real GNP.

The GNP trend-adjusted index changes are derived as in the explanation of line 6.1 below.

The following notes explain the numbered lines in the printouts.

Line 4. Count of component series is the number of series included in the average change. It diminishes towards the most recent months because not all series are equally up to date. Hence the averages for the recent months are less representative and most subject to revision. We do not use, as a rule, averages based upon less than half the total number of series regularly included in an index.

Line 6.0. The composite index, 1967=100, is derived by first cumulating the standardized percent changes (line 5) with the initial month of the historical series as 100 and then re-basing the resulting index so that 1967=100.

Line 6.1. This line shows the composite index adjusted each month so that its rate of growth, 1966 to 1976, is equal to that in real GNP for the country concerned during 1966 to 1976, and rebased so that 1970 = 100. Hence line 6.0 contains the composite index without adjustment to the GNP trend (with 1967 = 100), while line 6.1 contains the index with adjustment to the GNP trend (with 1970 = 100). For most purposes the latter index is the most useful. The GNP trend rates (1966-76, at annual rate) are: United States, 2.7%; Canada, 4.7%; United Kingdom, 2.0%; West Germany, 3.5%; France, 4.8%; Italy, 4.1%; Japan, 8.1%; 4 European countries, 3.6%; 6 countries excluding the U.S., 4.8%; 7 countries, 3.6%.

Line 6.2. This is the percentage change in the GNP trended index (line 6.1) over moving six-month intervals (e.g., June to December, July to January, etc.) at annual rate compounded, placed in the terminal month of the interval.

Line 6.3. This is the percentage change in the GNP trended index (line 6.1) obtained by dividing the current month by the average of the twelve preceding months. For example, if June is the current month, the rate is based upon the ratio of June to the average of the twelve months ending May. The interval from June to the middle of this twelve month average is 6.5 months. Hence the ratio is raised to the 12/6.5 power to put it on an annual rate basis. The result, expressed as a percentage change at annual rate, is placed in June.

Since the twelve-month moving average used as the base for this rate is smoother than the individual monthly figures, the rate is smoother than the ordinary six-month rate (Line 6.2) but has approximately the same cyclical timing characteristics. It will usually reach highs and lows earlier than the twelve-month rate (Line 6.4) but may not show cyclical movements so clearly.

The new rate is analogous to what would be obtained by taking a weighted twelve-month moving average of the index itself, giving a weight of 12 to the current month, 11 to the preceding month, 10 to the month before that, and so on down to 1, and then taking the month-to-month changes in this smoothed index.

Line 6.4. This is the percentage change in the GNP trended index (line 6.1) obtained by dividing the current month by the average of the twelve months ending six months before the current month. For example,

the December figure is divided by the average for the year ending the preceding June; the January figure is divided by the average for the year ending the preceding July; etc. The result is similar to the ordinary change from same month of preceding year except that the year ago figure is replaced by an average for the year of which it is (approximately) the central month. This has the effect of eliminating erratic movements in the year ago figure and producing a smoother percentage change. These rates are decidedly less erratic than the six-month rates (line 6.2) but tend to reach cyclical turning points a month or two later. They are somewhat less erratic than the six-month, smoothed rates (line 6.3) but also reach turning points later.

Multicountry composite indexes

The composite indexes for the four European countries, six countries excluding the United States, and all seven countries are obtained by weighting each GNP trended index (1970=100) by the GNP of the country in 1970, expressed in U.S. dollars. The weights expressed as percentages are:

	US	CA	UK	WG	FR	IT	JA	Total
4 countries	..	..	22.0	34.4	26.6	17.0	..	100.0
6 countries	..	10.1	14.5	22.8	17.5	11.2	23.9	100.0
7 countries	54.4	4.6	6.6	10.4	8.0	5.1	10.9	100.0

The printout includes not only the indexes for these three groups of countries but also their percentage changes at annual rate over the preceding six months (corresponding to line 6.2 above), the six month smoothed percentage changes (corresponding to line 6.3) and the percentage changes from same month year ago, smoothed (corresponding to line 6.4).

ABOUT THE CENTER FOR INTERNATIONAL BUSINESS CYCLE RESEARCH

The Center for International Business Cycle Research, established in 1979, specializes in the study of trends and fluctuations in economic growth and inflation in the United States and other countries. The data contained in this publication are the result of its ongoing research programs on international business cycles. Readers are invited to submit comments and suggestions concerning this publication. In addition, readers wishing to secure historical data for the series shown may do so by communicating with:

Jean L. Maltz, Center for International Business Cycle Research,
808 Uris Hall, Columbia University, New York, NY 10027. Telephone: (212) 280-2916

ABOUT THIS REPORT

INTERNATIONAL ECONOMIC INDICATORS (IEI) provides a monthly look at 130 economic time series covering the seven major industrial countries (forty of these series are unavailable in any other source).

The basic research underlying the compilation began in 1974, under the direction of Dr. Geoffrey H. Moore and Dr. Philip A. Klein, following the methodology for selecting and evaluating indicators for the U.S. economy (published by the U.S. Department of Commerce in Business Conditions Digest). Additional indicators and other countries will be included in the compilation as the Center's research program develops.

The dominant feature of IEI is the composite indexes section, in which leading and coincident cyclical indexes are presented for the seven major industrial countries and for groups of countries. Studies by the Center have shown the usefulness of these cyclical indexes for forecasting, measuring and interpreting short-term fluctuations in aggregate economic activity, inflation, employment and foreign trade flows. Cyclical indicators are economic time series which have been identified as leaders, coinciders, or laggards based on their general conformity to cyclical movements in aggregate economic activity.

ORDER FORM

Please enter my subscription for the publications checked below:

INTERNATIONAL ECONOMIC INDICATORS (IEI)

- ☐ Corporate @ \$300/year (U.S. and Canada)
☐ Foreign @ \$350/year (includes air mail)

New Features and Changes for This Issue
Summary of Current Leading and Coincident Indexes

PART I
COMPOSITE INDEXES

Leading Indexes, seven countries (Table 1).....	1
Coincident Indexes, seven countries (Table 2).....	3
Charts of Indexes and Growth Rates, 1973-83	5-15

PART II
COMPONENTS OF COMPOSITE INDEXES

Charts of leading series, 1979-83 , seven countries.....	16-21
Charts of coincident series, 1979-83 , seven countries.....	22-26
United States (12 leading, 6 coincident series).....	27
Canada (12 leading, 6 coincident series).....	31
United Kingdom (12 leading, 6 coincident series).....	35
West Germany (10 leading, 7 coincident series).....	39
France (8 leading, 5 coincident series).....	43
Italy (6 leading, 5 coincident series).....	47
Japan (10 leading, 6 coincident series).....	51

PART III
MULTICOUNTRY COMPOSITE INDEXES

Three Countries excl. Europe (34 leading, 18 coincident series).....	57,59
Four European countries (36 leading, 23 coincident series).....	57,59
Six countries excl. U.S. (58 leading, 35 coincident series).....	57,59
Seven countries (70 leading, 41 coincident series).....	57,59

PART IV APPENDIXES (June & December issues)

- A. Growth cycle peak and trough dates, 13 countries
- B. Median leads and lags of individual indicator at growth cycle turning points, 10 countries
- C. Median leads and lags of composite indexes at growth cycle turning points, 7 countries
- D. How to read the IEI printouts for each country

NEW FEATURES AND CHANGES FOR THIS ISSUE

Changes are made from time to time in IEI to incorporate recent findings of the Center's international business cycle research, newly available series, and revisions made by source agencies of the Center. These changes may result in revisions of data, additions or deletions of series, changes in the composition of indexes, etc.

Special Note to Users of IEI.

Several major revisions have been made in the IEI data.

1. The composite indexes have been put on the base 1980=100 instead of 1970=100.
2. The "target trend" rate for the indexes, which was previously the average rate of increase in real GNP during 1966 to 1976, has been up-dated to cover a more recent period, 1969 to 1979. These rates, marked by arrows on the growth rate charts, are:

								3	4	6	7
1969-79,	US	CA	UK	WG	FR	IT	JA	cos.	cos.	cos.	cos.
annual rate (%)	3.1	4.2	1.6	3.1	4.1	3.3	5.4	3.7	3.0	3.8	3.5

3. A new multicountry index has been compiled, including the three countries outside Europe, namely, United States, Canada, and Japan.
4. The multicountry indexes are weighted by each country's GNP in 1980 rather than 1970, expressed in U.S. dollars. The new weights, in terms of percentages, are:

	US	Can	UK	WG	FR	IT	JA	Total
3 countries ex. Europe	65.1	6.1					28.8	100.0%
4 European countries			23.7	33.3	27.0	16.0		100.0%
6 countries ex. U.S.			6.7	14.6	20.6	16.7	9.9	31.5
7 countries	41.6	3.9	8.5	12.0	9.8	5.8	18.4	100.0%

5. The industrial materials price indicator is expressed as a rate of change rather than an index. The rate of change is more closely tied to demand and supply pressures and is a better leading indicator of the business cycle as well as the rate of inflation. This rate is now included among the indicators for West Germany as well as the other countries except Italy, where a materials price index is not available.
6. The new orders for durable goods series for Canada has been replaced by new orders for consumer goods. This avoids the previous overlap with machinery and equipment orders.

Note: All series are adjusted for seasonal variations unless designated NSA. Series designated quarterly (Q) are interpolated monthly with the quarterly figure placed at the mid-month of the quarter.

SUMMARY: The indexes that anticipate what's ahead for the business cycle signal continued expansion throughout the industrialized world. In Europe, however, the economic recovery is developing more gradually than in North America and Japan. The combined leading index for France, West Germany, Italy and the United Kingdom was rising at an annual rate of 6% in October, while the leading index covering the U.S., Canada and Japan was climbing at a 15% rate. This differential pattern is equally pronounced in the indexes of economic performance, which usually follow the leaders. The recent growth rate of the performance index is zero for Europe against 8% for the other three countries.

Note: The indexes have been revised in several ways. For details see the previous page.

	Ten-year Growth Rate 1969-79	Indexes of Economic Performance Growth Rates*			Leading Business Cycle Indexes Growth Rates*			Current Reading on the Cycle	Latest Month Covered
		6 mos. ago	3 mos. ago	Latest month	6 mos. ago	3 mos. ago	Latest month

ABOUT THE CENTER FOR INTERNATIONAL BUSINESS CYCLE RESEARCH

The Center for International Business Cycle Research, established in 1979, specializes in the study of trends and fluctuations in economic growth and inflation in the United States and other countries. The data contained in this publication are the result of its ongoing research programs on international business cycles. Readers are invited to submit comments and suggestions concerning this publication. In addition, readers wishing to secure historical data for the series shown may do so by communicating with:

Jean L. Maltz, Center for International Business Cycle Research,
808 Uris Hall, Columbia University, New York, NY 10027. Telephone: (212) 280-2916

ABOUT THIS REPORT

INTERNATIONAL ECONOMIC INDICATORS (IEI) provides a monthly look at 130 economic time series covering the seven major industrial countries (forty of these series are unavailable in any other source).

The basic research underlying the compilation began in 1974, under the direction of Dr. Geoffrey H. Moore and Dr. Philip A. Klein, following the methodology for selecting and evaluating indicators for the U.S. economy (published by the U.S. Department of Commerce in Business Conditions Digest). Additional indicators and other countries will be included in the compilation as the Center's research program develops.

The dominant feature of IEI is the composite indexes section, in which leading and coincident cyclical indexes are presented for the seven major industrial countries and for groups of countries. Studies by the Center have shown the usefulness of these cyclical indexes for forecasting, measuring and interpreting short-term fluctuations in aggregate economic activity, inflation, employment and foreign trade flows. Cyclical indicators are economic time series which have been identified as leaders, coinciders, or laggards based on their general conformity to cyclical movements in aggregate economic activity.

ORDER FORM

Please enter my subscription for the publications checked below:

INTERNATIONAL ECONOMIC

INDICATORS (IEI)

- ☐ Corporate @ \$300/year (U.S. and Canada)
- ☐ Foreign @ \$350/year (includes air mail)
- University or Public Libraries
- ☐ monthly @ \$150/year

IEI HISTORICAL DATA*

- ☐ Printout, all series and indexes, \$150
- ☐ Printout, indexes only, \$50
- ☐ Magnetic Tape (9 Track), all series and indexes, \$150

*Add \$30 for foreign airmail

IEIDATA is also available, on-line, through Haver Analytics time-sharing service. For more information, contact Haver Analytics, 420 Lexington Avenue, Suite 2113, New York, N.Y. 10017 (212) 986-9300.

New Features and Changes for This Issue
Summary of Current Leading and Coincident Indexes

PART I
COMPOSITE INDEXES

Leading Indexes, seven countries (Table 1).....	1
Coincident Indexes, seven countries (Table 2).....	3
Charts of Indexes and Growth Rates, 1973-83.....	5-15

PART II
COMPONENTS OF COMPOSITE INDEXES

Charts of leading series, 1980-84, seven countries.....	16-21
Charts of coincident series, 1980-84, seven countries.....	22-26
United States (12 leading, 6 coincident series).....	27
Canada (12 leading, 6 coincident series).....	31
United Kingdom (12 leading, 6 coincident series).....	35
West Germany (11 leading, 7 coincident series).....	39
France (8 leading, 5 coincident series).....	43
Italy (6 leading, 5 coincident series).....	47
Japan (10 leading, 6 coincident series).....	51

PART III
MULTICOUNTRY COMPOSITE INDEXES

Three countries excl. Europe (34 leading, 18 coincident series).....	57,59
Four European countries (37 leading, 23 coincident series).....	57,59
Six countries excl. U.S. (59 leading, 35 coincident series).....	57,59
Seven countries (71 leading, 41 coincident series).....	57,59

PART IV APPENDIXES (June & December issues)

- A. Growth cycle peak and trough dates, 13 countries
- B. Median leads and lags of individual indicator at growth cycle turning points, 10 countries
- C. Median leads and lags of composite indexes at growth cycle turning points, 7 countries
- D. How to read the IEI printouts for each country

NEW FEATURES AND CHANGES FOR THIS ISSUE

Changes are made from time to time in IEI to incorporate recent findings of the Center's international business cycle research, newly available series, and revisions made by source agencies of the Center. These changes may result in revisions of data, additions or deletion of series, changes in the composition of indexes, etc.

Note: All series are adjusted for seasonal variations unless designated NSA. Series designated quarterly (Q) are interpolated monthly with the quarterly figure placed at the mid-month of the quarter.

February 1984

THE LATEST READING OF THE INTERNATIONAL INDICATORS

SUMMARY: Growth rates in the leading economic indexes for the seven major industrial nations continue to register solid progress toward economic recovery. Japan's 13% rate topped the list, followed closely by the U.S. at 12%. Growth rates in the leading indexes for Canada, West Germany and Italy ranged from 10% to 7%, while the United Kingdom and France clocked a sluggish 2%. Upswings in the economic performance indexes, which move coincidentally with the economy, continue to be less vigorous than in the leaders. Nevertheless, all countries except Italy seem to have turned the corner.

	Ten-year Growth Rate 1969-79	Indexes of Economic Performance Growth Rates*			Leading Business Cycle Indexes Growth Rates*			Current Reading on the Cycle	Latest Month Covered

ABOUT THE CENTER FOR INTERNATIONAL BUSINESS CYCLE RESEARCH

The Center for International Business Cycle Research, established in 1979, specializes in the study of trends and fluctuations in economic growth and inflation in the United States and other countries. The data contained in this publication are the result of its ongoing research programs on international business cycles. Readers are invited to submit comments and suggestions concerning this publication. In addition, readers wishing to secure historical data for the series shown may do so by communicating with:

Jean L. Maltz, Center for International Business Cycle Research,
808 Uris Hall, Columbia University, New York, NY 10027. Telephone: (212) 280-2916

ABOUT THIS REPORT

INTERNATIONAL ECONOMIC INDICATORS (IEI) provides a monthly look at 130 economic time series covering the seven major industrial countries (forty of these series are unavailable in any other source).

The basic research underlying the compilation began in 1974, under the direction of Dr. Geoffrey H. Moore and Dr. Philip A. Klein, following the methodology for selecting and evaluating indicators for the U.S. economy (published by the U.S. Department of Commerce in Business Conditions Digest). Additional indicators and other countries will be included in the compilation as the Center's research program develops.

The dominant feature of IEI is the composite indexes section, in which leading and coincident cyclical indexes are presented for the seven major industrial countries and for groups of countries. Studies by the Center have shown the usefulness of these cyclical indexes for forecasting, measuring and interpreting short-term fluctuations in aggregate economic activity, inflation, employment and foreign trade flows. Cyclical indicators are economic time series which have been identified as leaders, coinciders, or laggards based on their general conformity to cyclical movements in aggregate economic activity.

ORDER FORM

Please enter my subscription for the publications checked below:

INTERNATIONAL ECONOMIC INDICATORS (IEI)

- ☐ Corporate @ \$300/year (U.S. and Canada)
☐ Foreign @ \$350/year (includes air mail)
University or Public Libraries
☐ monthly @ \$150/year

IEI HISTORICAL DATA*

- ☐ Printout, all series and indexes, \$150
☐ Printout, indexes only, \$50
☐ Magnetic Tape (9 Track), all series and indexes, \$150

*Add \$30 for foreign airmail

IEIDATA is also available, on-line, through Haver Analytics time-sharing service. For more information, contact Haver Analytics, 420 Lexington Avenue, Suite 2113, New York, N.Y. 10017 (212) 986-9300.

New Features and Changes for This Issue
Summary of Current Leading and Coincident Indexes

PART I
COMPOSITE INDEXES

Leading Indexes, seven countries (Table 1).....	1
Coincident Indexes, seven countries (Table 2).....	3
Charts of Indexes and Growth Rates, 1973-83.....	5-15

PART II
COMPONENTS OF COMPOSITE INDEXES

Charts of leading series, 1980-84, seven countries.....	16-21
Charts of coincident series, 1980-84, seven countries.....	22-26
United States (12 leading, 6 coincident series).....	27
Canada (12 leading, 6 coincident series).....	31
United Kingdom (12 leading, 6 coincident series).....	35
West Germany (11 leading, 7 coincident series).....	39
France (8 leading, 5 coincident series).....	43
Italy (6 leading, 5 coincident series).....	47
Japan (10 leading, 6 coincident series).....	51

PART III
MULTICOUNTRY COMPOSITE INDEXES

Three countries excl. Europe (34 leading, 18 coincident series).....	57,59
Four European countries (37 leading, 23 coincident series).....	57,59
Six countries excl. U.S. (59 leading, 35 coincident series).....	57,59
Seven countries (71 leading, 41 coincident series).....	57,59

PART IV APPENDIXES (June & December issues)

- A. Growth cycle peak and trough dates, 13 countries
- B. Median leads and lags of individual indicator at growth cycle turning points, 10 countries
- C. Median leads and lags of composite indexes at growth cycle turning points, 7 countries
- D. How to read the IEI printouts for each country

NEW FEATURES AND CHANGES FOR THIS ISSUE

Changes are made from time to time in IEI to incorporate recent findings of the Center's international business cycle research, newly available series, and revisions made by source agencies of the Center. These changes may result in revisions of data, additions or deletions of series, changes in the composition of indexes, etc.

Changes in this issue:

Most of the European series are now shown on base 1980=100 or in 1980 prices.

Note: All series are adjusted for seasonal variations unless designated NSA. Series designated quarterly (Q) are interpolated monthly with the quarterly figure placed at the mid-month of the quarter.

March 1984

THE LATEST READING OF THE INTERNATIONAL INDICATORS

Summary: West Germany and France have joined the group of countries that have rapidly rising leading indexes. The latest growth rates for this group are: France, 13%; U.S., 12%; Japan, 11%; Canada, 10%; West Germany, 9%. Leading index growth rates for the United Kingdom and Italy are still in the 3 to 4% growth rate range. Some growth is better than none, however, and the leading index for all seven countries taken together is advancing at a 10% clip. The economic performance indexes also are rising in all countries except Italy.

PART I
COMPOSITE INDEXES

Leading Indexes, seven countries (Table 1).....	1
Coincident Indexes, seven countries (Table 2).....	3
Charts of Indexes and Growth Rates, 1973-83.....	5-15

PART II
COMPONENTS OF COMPOSITE INDEXES

Charts of leading series, 1980-84, seven countries.....	16-21
Charts of coincident series, 1980-84, seven countries.....	22-26
United States (12 leading, 6 coincident series).....	27
Canada (12 leading, 6 coincident series).....	31
United Kingdom (12 leading, 6 coincident series).....	35
West Germany (11 leading, 7 coincident series).....	39
France (8 leading, 5 coincident series).....	43
Italy (6 leading, 5 coincident series).....	47
Japan (10 leading, 6 coincident series).....	51

PART III
MULTICOUNTRY COMPOSITE INDEXES

Three countries excl. Europe (34 leading, 18 coincident series).....	57,59
Four European countries (37 leading, 23 coincident series).....	57,59
Six countries excl. U.S. (59 leading, 35 coincident series).....	57,59
Seven countries (71 leading, 41 coincident series).....	57,59

PART IV APPENDIXES (June & December issues)

- A. Growth cycle peak and trough dates, 13 countries
- B. Median leads and lags of individual indicator at growth cycle turning points, 10 countries
- C. Median leads and lags of composite indexes at growth cycle turning points, 7 countries
- D. How to read the IEI printouts for each country

NEW FEATURES AND CHANGES FOR THIS ISSUE

Changes are made from time to time in IEI to incorporate recent findings of the Center's international business cycle research, newly available series, and revisions made by source agencies of the Center. These changes may result in revisions of data, additions or deletion of series, changes in the composition of indexes, etc.

Note: All series are adjusted for seasonal variations unless designated NSA. Series designated quarterly (Q) are interpolated monthly with the quarterly figure placed at the mid-month of the quarter.

April 1984

THE LATEST READING OF THE INTERNATIONAL INDICATORS

Summary: Vigorous growth continues to describe the latest leading indexes for five of the seven major industrial countries. Japan has forged ahead to the top position, with a growth rate of 14% in its leading index. The leading indexes for the United States, France, Canada and West Germany are showing growth rates in the 8 to 10% range. Slow growth, at 4%, characterizes the indexes for the United Kingdom and Italy. Growth rates in the economic performance indexes are substantially lower than in the leading index in most countries, as is usually true when an expansion gets underway.

	Ten-year Growth Rate 1969-79	Indexes of Economic Performance Growth Rates*			Leading Business Cycle Indexes Growth Rates*			Current Reading on the Cycle	Latest Month Covered

ABOUT THE CENTER FOR INTERNATIONAL BUSINESS CYCLE RESEARCH

The Center for International Business Cycle Research, established in 1979, specializes in the study of trends and fluctuations in economic growth and inflation in the United States and other countries. The data contained in this publication are the result of its ongoing research programs on international business cycles. Readers are invited to submit comments and suggestions concerning this publication. In addition, readers wishing to secure historical data for the series shown may do so by communicating with:

Jean L. Maltz, Center for International Business Cycle Research
808 Uns Hall, Columbia University, New York, NY 10027 Telephone (212) 280-2916

ABOUT THIS REPORT

INTERNATIONAL ECONOMIC INDICATORS (IEI) provides a monthly look at 130 economic time series covering the seven major industrial countries (forty of these series are unavailable in any other source).

The basic research underlying the compilation began in 1974, under the direction of Dr. Geoffrey H. Moore and Dr. Philip A. Klein, following the methodology for selecting and evaluating indicators for the U.S. economy (published by the U.S. Department of Commerce in *Business Conditions Digest*). Additional indicators and other countries will be included in the compilation as the Center's research program develops.

The dominant feature of **IEI** is the composite indexes section, in which leading and coincident cyclical indexes are presented for the seven major industrial countries and for groups of countries. Studies by the Center have shown the usefulness of these cyclical indexes for forecasting, measuring and interpreting short-term fluctuations in aggregate economic activity, inflation, employment and foreign trade flows. Cyclical indicators are economic time series which have been identified as leaders, coinciders, or laggards based on their general conformity to cyclical movements in aggregate economic activity.

ORDER FORM

Please enter my subscription for the publications checked below:

INTERNATIONAL ECONOMIC

INDICATORS (IEI)

- ☐ Corporate @ \$300/year (U.S. and Canada)
☐ Foreign @ \$350/year (includes air mail)
☐ University or Public Libraries
☐ monthly @ \$150/year

IEI HISTORICAL DATA*

- ☐ Printout, all series and indexes, \$150
☐ Printout, indexes only, \$50
☐ Magnetic Tape (9 Track), all series and indexes, \$150

*Add \$30 for foreign airmail

IEIDATA is also available, on-line, through Haver Analytics time-sharing service. For more information, contact Haver Analytics, 420 Lexington Avenue, Suite 2113, New York, N.Y. 10017 (212) 986-9300.

New Features and Changes for This Issue
Summary of Current Leading and Coincident Indexes

PART I
COMPOSITE INDEXES

Leading Indexes, seven countries (Table 1).....	1
Coincident Indexes, seven countries (Table 2).....	3
Charts of Indexes and Growth Rates, 1973-83.....	5-15

PART II
COMPONENTS OF COMPOSITE INDEXES

Charts of leading series, 1980-84, seven countries.....	16-21
Charts of coincident series, 1980-84, seven countries.....	22-26
United States (12 leading, 6 coincident series).....	27
Canada (12 leading, 6 coincident series).....	31
United Kingdom (12 leading, 6 coincident series).....	35
West Germany (11 leading, 7 coincident series).....	39
France (8 leading, 5 coincident series).....	43
Italy (6 leading, 5 coincident series).....	47
Japan (10 leading, 6 coincident series).....	51

PART III
MULTICOUNTRY COMPOSITE INDEXES

Three countries excl. Europe (34 leading, 18 coincident series).....	57,59
Four European countries (37 leading, 23 coincident series).....	57,59
Six countries excl. U.S. (59 leading, 35 coincident series).....	57,59
Seven countries (71 leading, 41 coincident series).....	57,59

PART IV APPENDIXES (June & December issues)

- A. Growth cycle peak and trough dates, 13 countries
- B. Median leads and lags of individual indicator at growth cycle turning points, 10 countries
- C. Median leads and lags of composite indexes at growth cycle turning points, 7 countries
- D. How to read the IEI printouts for each country

NEW FEATURES AND CHANGES FOR THIS ISSUE

Changes are made from time to time in IEI to incorporate recent findings of the Center's international business cycle research, newly available series, and revisions made by source agencies of the Center. These changes may result in revisions of data, additions or deletion of series, changes in the composition of indexes, etc.

Changes in this issue:

Canada-New Orders, Consumer Goods is shown in millions of 1971 Canadian dollars and United Kingdom-Construction, New Orders, Private Industrial Work is shown in millions of 1980 Pounds.

Note: All series are adjusted for seasonal variations unless designated NSA. Series designated quarterly (Q) are interpolated monthly with the quarterly figure placed at the mid-month of the quarter.

Summary: The leading indexes continue to give an optimistic reading on future growth of the seven major industrial countries. The composite leading index for all seven countries registered an 11% annual growth rate in February, down slightly from 12% six months before. The economic performance index for the group of seven was rising at a 6% rate, up from 4% six months earlier. Most of the strength in these indexes came from Japan, the U.S., Canada and West Germany. France, Italy and the United Kingdom displayed less exuberance.

	Ten-year Growth Rate 1969-79	Indexes of Economic Performance Growth Rates*			Leading Business Cycle Indexes Growth Rates*			Current Reading on the Cycle	Latest Month Covered

ABOUT THE CENTER FOR INTERNATIONAL BUSINESS CYCLE RESEARCH

The Center for International Business Cycle Research, established in 1979, specializes in the study of trends and fluctuations in economic growth and inflation in the United States and other countries. The data contained in this publication are the result of its ongoing research programs on international business cycles. Readers are invited to submit comments and suggestions concerning this publication. In addition, readers wishing to secure historical data for the series shown may do so by communicating with:

Jean L. Maltz, Center for International Business Cycle Research,
808 Uris Hall, Columbia University, New York, NY 10027. Telephone: (212) 280-2916

ABOUT THIS REPORT

INTERNATIONAL ECONOMIC INDICATORS (IEI) provides a monthly look at 130 economic time series covering the seven major industrial countries (forty of these series are unavailable in any other source).

The basic research underlying the compilation began in 1974, under the direction of Dr. Geoffrey H. Moore and Dr. Philip A. Klein, following the methodology for selecting and evaluating indicators for the U.S. economy (published by the U.S. Department of Commerce in Business Conditions Digest). Additional indicators and other countries will be included in the compilation as the Center's research program develops.

The dominant feature of IEI is the composite indexes section, in which leading and coincident cyclical indexes are presented for the seven major industrial countries and for groups of countries. Studies by the Center have shown the usefulness of these cyclical indexes for forecasting, measuring and interpreting short-term fluctuations in aggregate economic activity, inflation, employment and foreign trade flows. Cyclical indicators are economic time series which have been identified as leaders, coinciders, or laggards based on their general conformity to cyclical movements in aggregate economic activity.

ORDER FORM

Please enter my subscription for the publications checked below:

INTERNATIONAL ECONOMIC

INDICATORS (IEI)

- ☐ Corporate @ \$300/year (U.S. and Canada)
- ☐ Foreign @ \$350/year (includes air mail)
- ☐ University or Public Libraries
- ☐ monthly @ \$150/year

IEI HISTORICAL DATA*

- ☐ Printout, all series and indexes, \$150
- ☐ Printout, indexes only, \$50
- ☐ Magnetic Tape (9 Track), all series and indexes, \$150

*Add \$30 for foreign airmail

New Features and Changes for This Issue
Summary of Current Leading and Coincident Indexes

PART I
COMPOSITE INDEXES

Leading Indexes, seven countries (Table 1).....	1
Coincident Indexes, seven countries (Table 2).....	3
Charts of Indexes and Growth Rates, 1973-83.....	5-15

PART II
COMPONENTS OF COMPOSITE INDEXES

Charts of leading series, 1980-84, seven countries.....	16-21
Charts of coincident series, 1980-84, seven countries.....	22-26
United States (12 leading, 6 coincident series).....	27
Canada (12 leading, 6 coincident series).....	31
United Kingdom (12 leading, 6 coincident series).....	35
West Germany (11 leading, 7 coincident series).....	39
France (8 leading, 5 coincident series).....	43
Italy (7 leading, 5 coincident series).....	47
Japan (10 leading, 6 coincident series).....	51

PART III
MULTICOUNTRY COMPOSITE INDEXES

Three countries excl. Europe (34 leading, 18 coincident series).....	57,59
Four European countries (38 leading, 23 coincident series).....	57,59
Six countries excl. U.S. (60 leading, 35 coincident series).....	57,59
Seven countries (72 leading, 41 coincident series).....	57,59

PART IV APPENDIXES (June & December issues)

- A. Growth cycle peak and trough dates, 13 countries
- B. Median leads and lags of individual indicator at growth cycle turning points, 10 countries
- C. Median leads and lags of composite indexes at growth cycle turning points, 7 countries
- D. Construction of composite indexes

NEW FEATURES AND CHANGES FOR THIS ISSUE

Changes are made from time to time in IEI to incorporate recent findings of the Center's international business cycle research, newly available series, and revisions made by source agencies of the Center. These changes may result in revisions of data, additions or deletions of series, changes in the composition of indexes, etc.

Changes in this issue are as follows:

West Germany - A more comprehensive series, Gross Entrepreneurial and Property Income, million 1980 DM, replaces the previous series, Net Income from Entrepreneurial Activity, in the leading index.

Italy - A new series, Producers' Materials Prices, NSA, six month smoothed change, annual rate, %, has been included in the leading index.

Note: All series are adjusted for seasonal variations unless designated NSA. Series designated quarterly (Q) are interpolated monthly with the quarterly figure placed at the mid-month of the quarter.

June 1984

THE LATEST READING OF THE INTERNATIONAL INDICATORS

Summary: The composite leading index for Japan, Canada and the United States recorded an 11% annual rate of growth in March, somewhat slower than the 15% rate recorded six months ago. The corresponding rate for the four European countries was 5% in March, about the same as the 6% rate six months earlier. The economic performance indexes, which reflect changes in production, employment, income and sales, show similar differences, with 8% growth for Japan, Canada and the U.S. and negligible growth for Europe.

	Ten-year Growth Rate 1969-79	Indexes of Economic Performance Growth Rates*			Leading Business Cycle Indexes Growth Rates*			Current Reading on the Cycle	Latest Month Covered
		6 mos. ago	3 mos. ago	Latest month	6 mos. ago	3 mos. ago	Latest month		
		Annual rates, percent

IV. APPENDIX A

UNDERSTANDING GROWTH CYCLES and their TURNING POINTS

The historical growth cycle turning points for the thirteen countries, shown on the facing page, have been designated by the Center for International Business Cycle Research (CIBCR). They mark the approximate dates when aggregate economic activity was farthest above its long-run trend level (peak) or farthest below its long-run trend level (trough). Growth cycle turning points are not to be confused with business cycle turning points, which mark the dates when the actual 'level' of economic activity reached a peak or trough, regardless of the long run trend.

These historical growth cycle turning dates are subject to periodic review by CIBCR and on occasion are changed as a result of significant revisions in the economic time series used in their determination. The dates shown in this publication are based upon a 1984 review. The absence of a recent turning date, however, does not necessarily mean that one has not occurred, since dates for some countries are not kept up to date on a regular basis.

Growth cycle chronologies are important for two basic reasons. First, growth cycle peaks tend to precede business cycle peaks while their troughs tend to be coincident with business cycle troughs. Thus, growth cycle analysis offers an "early warning system" for cyclical episodes which ultimately may become actual recessions. Second, growth cycle analysis provides a means of identifying mild setbacks in economic activity which do not actually become declines in the level of activity but merely declines in its rate of growth. As a result, there are usually more growth cycles than business cycles in a given country.

In dating growth cycles, selection of turning points is based upon visually inspected computer selected turns in a variety of economic series. The methodology for turning point selection, as described here briefly, involves the following basic steps:

1. Coincident series such as industrial production, GNP, personal income, employment and retail sales are first deflated, seasonally adjusted and their trend removed.
2. For each of these series final computer selected turning points are then derived from the deviations of the seasonally adjusted data from the final trend.^{1/}
3. These computer selected turning points in the deviations are then visually inspected and in some cases amended if, for example, the cycle involves too small an amplitude, or if there were identifiable 'exogenous' factors upsetting the cycle.
4. Median dates of peaks (or of troughs) of all the coincident series considered above are then computed.
5. These median dates are then compared with the turning points in the composite coincident index, and a decision made on the final growth cycle dates.

^{1/} For a description of the trend-fitting procedure see "The Phase-Average Trend: A New Way of Measuring Economic Growth", Charlotte Boschan, Walter W. Ebanks, Proceedings of the Business and Economics Statistics Section, American Statistical Review, 1978, p. 332.

T	12/82	5/83		11/82			6/83					6/83	7/83	10/82		4/83	2/83

Note: The three, four, six and seven country chronologies are based on composite indexes of output, income, employment and trade, weighted by each country's GNP in 1970, expressed in U.S. dollars. The three countries include the United States, Canada and Japan. The four countries are the United Kingdom, West Germany, France and Italy. The six countries include these four plus Canada and Japan, and the seven countries include the United States as well. The chronologies begin at different dates because appropriate data are not available earlier. The absence of a recent date does not necessarily mean that a turn has not occurred.

Note: NA = no indicator available; ** means indicator shows no cycles.

^{a/}The series available for each country are sometimes only roughly equivalent in content to the U.S. series. In some cases two series are used to match the U.S. series and the median includes all observations for both series. The periods covered vary for each indicator and each country, but all are within the years 1948-1981.

APPENDIX D

Construction of Composite Indexes

Leading, coincident and lagging composite indexes have been constructed by the Center for International Business Cycle Research for the United States, Canada, United Kingdom, West Germany, France, Italy and Japan, as well as for other countries. In addition, composite indexes are compiled for several groups of countries, all weighted by the respective countries' GNP in current U.S. dollars in 1980. The method used in constructing the indexes corresponds to that used by the U.S. Department of Commerce in Business Conditions Digest, with some differences in the method of amplitude and trend adjustment as described below.^{1/}

Historical data for the indexes and their components are available in printouts and on magnetic tape from the Center for International Business Cycle Research.

The starting dates for the composite indexes, beginning in January of the year shown are as follows:

	<u>Leading</u>	<u>Coincident</u>	<u>Lagging</u>
United States	1948	1948	1948
Canada	1948	1948	1948
United Kingdom	1955	1952	1955
West Germany	1957	1950	1962
France	1955	1955	1964
Italy	1955	1956	1970
Japan	1953	1954	1953
3 countries excl. Europe	1953	1954	1953
4 European countries	1955	1955	1966
6 countries excl. U.S.	1955	1955	1966
7 countries	1955	1955	1966

The weights for the multicountry indexes, expressed as percentages of GNP in 1980, are:

	US	Can	UK	WG	FR	IT	JA	Total
3 countries excl. Europe	65.1	6.1					28.8	100.0%
4 European countries			23.7	33.3	27.0	16.0		100.0%
6 countries excl. U.S.		6.7	14.6	20.6	16.7	9.9	31.5	100.0%
7 countries	41.6	3.9	8.5	12.0	9.8	5.8	18.4	100.0%

The method of constructing the indexes can be explained by reference to the sample printout shown below, using the U.S. coincident index as an example. Starting at the top, the country is identified followed by the title of the composite index. The word "deflated" in the title signifies

^{1/} See Handbook of Cyclical Indicators, U.S. Department of Commerce, Bureau of Economic Analysis, May 1977, pp. 73-76.

that each of the component indicators either represents a physical quantity or an aggregate value deflated by an appropriate price index.

Line 1. Each of the component series is identified by a code (e.g., component series USGM) the first two letters of which represent the country. Monthly series are distinguished from quarterly. Quarterly series are interpolated to obtain monthly values, with the quarterly figure centered in the middle month of the quarter. If a moving average were applied to the series the span of the moving average would be indicated on this line, but in these indexes no moving averages are used. Also, the component indicators are unweighted. A brief title of the series is given on the next line, together with the unit, whether it is monthly (M) or quarterly (Q), and whether it is treated invertedly. In the case of bankruptcies, for example, an increase is treated as a decline and vice versa (see line 2 below). All series are used in seasonally adjusted form unless otherwise specified after the title (NSA = not seasonally adjusted). Annual averages are computed from seasonally adjusted data and hence may not correspond to those published in the source, which are usually based upon raw data. Also, for quarterly series the annual averages are computed from monthly interpolations rather than from the quarterly figures.

Line 2. The "weighted changes" are the month-to-month changes in the series, either in percentage form ("percents") or differences, with signs either inverted (i.e., reversed) or not inverted as indicated. The next line gives the average month-to-month change without regard to sign, together with the period for which the average was computed (i.e., the entire length of the series). The words "imposed standardization" followed by a figure mean that the latter figure was used to standardize the changes. The alternative would be to use the average covering the entire period, but since this would change as more data are included, an average ending at an earlier, fixed date was "imposed." The percentage changes are not computed in the usual fashion, with the initial figure as the base, but rather the base is the average of the two adjacent figures. That is, $(a_2 - a_1) + (a_1 + a_2) / 2 \times 100$. This has the effect of equalizing the range of percentage increases and percentage decreases (the limits are +200 and -200) so that they may be averaged without the upward bias that applies to the usual percentage changes. The standardization is performed by dividing the percent changes calculated in the above manner by the "imposed standardization" factor.

Line 3. The "average weighted changes" are the means for each month of the standardized percent changes (or differences) for all the series listed. The weights in this instance are unity, but standardization is, of course, itself a form of weighting. Its purpose is to equalize the month-to-month variations in the different series so that those that usually move in wide swings do not have a larger influence on the average than those that have a smaller amplitude of variation.

Line 4. Count of component series is the number of series included in the average change. It diminishes toward the most recent months because not all series are equally up to date. Hence the averages for the recent

months are less representative and most subject to revision. The Center does not, as a rule, use averages based upon less than half the total number of series regularly included in an index.

Line 5. "Standardized average weighted changes" are the average changes in line 3 divided first by a standardization factor, namely the "average change without regard to sign" shown on the line immediately below line 5, and then by a "weight applied" given on the next line. The first divisor is designed to adjust the "average weighted changes" (line 3) so that they will average unity. The divisor is computed for a fixed period, January 1953 to November 1975. The second divisor is designed to make the average of the final standardized changes equal to the average percent change per month in the "trend-cycle component" of the industrial production index in the country concerned (the latter average is the reciprocal of the "weight applied" figure). In this way both the leading and coincident indexes for a given country have the same average percent change, equal to that of the cyclical movements in industrial production in that country. The second step in the procedure seemed preferable to the alternative of letting the indexes for all countries have the same average percent change, namely unity. Using industrial production as the standard also seemed preferable to using real GNP for this purpose, since industrial production typically has a larger cyclical amplitude than real GNP. The trend-cycle component is a smooth moving average of the index. The average percent changes, 1953-1975, in this component of industrial production are:

United States	.72
Canada	.53
United Kingdom	.41
West Germany	.62
France	.65
Italy	.77
Japan	1.16

Line 6.0 The composite index, 1980=100, is derived by first cumulating the standardized percent changes (line 5) with the initial month of the historical series as 100 and then re-basing the resulting index so that 1980=100. The method of cumulation takes account of the method by which the changes were calculated. That is, if p is the percent change from month 1 to month 2 (calculated as explained in line 2), and y is the index for month 1, then the index for month 2 is y times $(200 + p)/(200 - p)$.

Line 6.1 This line shows the composite index adjusted each month so that its rate of growth, 1969 to 1979, is equal to that in real GNP for the country concerned during 1969 to 1979, and rebased so that 1980 = 100. Hence line 6.0 contains the composite index without adjustment to the GNP trend, while line 6.1 contains the index with adjustment to the GNP trend. For most purposes the latter index is the most useful. The GNP trend rates are:

								3	4	6	7
1969-79,	US	CA	UK	WG	FR	IT	JA	cos.	cos.	cos.	cos.
annual rate (%)	3.1	4.2	1.6	3.1	4.1	3.3	5.4	3.7	3.0	3.8	3.5

Line 6.2. This is the percentage change in the GNP trended index (line 6.1) over moving six-month intervals (e.g., June to December, July to January, etc.) at annual rate compounded, placed in the terminal month of the interval.

Line 6.3. This is the percentage change in the GNP trended index (line 6.1) obtained by dividing the current month by the average of the twelve preceding months. For example, if June is the current month, the rate is based upon the ratio of June to the average of the twelve months ending May. The interval from June to the middle of this twelve month average is 6.5 months. Hence the ratio is raised to the $12/6.5$ power to put it on an annual rate basis. The result, expressed as a percentage change at annual rate, is placed in June. It is called a six-month smoothed rate.

Since the twelve-month moving average used as the base for this rate is smoother than the individual monthly figures, the rate is smoother than the ordinary six-month rate (Line 6.2) but has approximately the same cyclical timing characteristics. It will usually reach highs and lows earlier than the twelve-month rate (Line 6.4) but may not show cyclical movements so clearly.

The new rate is analogous to what would be obtained by taking a weighted twelve-month moving average of the index itself, giving a weight of 12 to the current month, 11 to the preceding month, 10 to the month before that, and so on down to 1, and then taking the month-to-month changes in this smoothed index.

Line 6.4. This is the percentage change in the GNP trended index (line 6.1) obtained by dividing the current month by the average of the twelve months ending six months before the current month. For example, the December figure is divided by the average for the year ending the preceding June; the January figure is divided by the average for the year ending the preceding July; etc. The result is similar to the ordinary change from same month of preceding year except that the year ago figure is replaced by an average for the year of which it is (approximately) the central month. This has the effect of eliminating erratic movements in the year ago figure and producing a smoother percentage change. These rates are decidedly less erratic than the six-month rates (line 6.2) but tend to reach cyclical turning points about three months later. They are somewhat less erratic than the six-month, smoothed rates (line 6.3) but also reach turning points later.

Line 10. The summary measures pertain to the smoothness of the index without adjustment for GNP trend (line 6.0). CI-bar is the average percentage change in the index without regard to sign over spans of 1, 2, 3, etc. months. For the 1 month span it is equal (approximately) to the average month-to-month change in the "trend-cycle component" of the industrial production index for the country concerned, which was used to adjust the average changes on line 5. That is, the CI-bar figure for 1 month span is approximately equal to the reciprocal of the "weight applied" factor on line 5. I-bar and C-bar are the average percentage changes without regard to sign in the "irregular" component and the "trend-cycle" component of the index, respectively, and the I/C ratio is the ratio between these two averages. Months for cyclical dominance (MCD) is the number of months span required to reduce the I/C ratio to less than unity. Average duration of run is the average number of consecutive months the index (CI), or its components (I and C), or its moving average with span equal to MCD, moves in one direction. For further explanation of these measures see Business Conditions Digest, U.S. Department of Commerce, Appendix A.

ABOUT THE CENTER FOR INTERNATIONAL BUSINESS CYCLE RESEARCH

The Center for International Business Cycle Research, established in 1979, specializes in the study of trends and fluctuations in economic growth and inflation in the United States and other countries. The data contained in this publication are the result of its ongoing research programs on international business cycles. Readers are invited to submit comments and suggestions concerning this publication. In addition, readers wishing to secure historical data for the series shown may do so by communicating with:

Jean L. Maltz, Center for International Business Cycle Research,
808 Uris Hall, Columbia University, New York, NY 10027. Telephone: (212) 280-2916

ABOUT THIS REPORT

INTERNATIONAL ECONOMIC INDICATORS (IEI) provides a monthly look at 130 economic time series covering the seven major industrial countries (forty of these series are unavailable in any other source).

The basic research underlying the compilation began in 1974, under the direction of Dr. Geoffrey H. Moore and Dr. Philip A. Klein, following the methodology for selecting and evaluating indicators for the U.S. economy (published by the U.S. Department of Commerce in Business Conditions Digest). Additional indicators and other countries will be included in the compilation as the Center's research program develops.

The dominant feature of IEI is the composite indexes section, in which leading and coincident cyclical indexes are presented for the seven major industrial countries and for groups of countries. Studies by the Center have shown the usefulness of these cyclical indexes for forecasting, measuring and interpreting short-term fluctuations in aggregate economic activity, inflation, employment and foreign trade flows. Cyclical indicators are economic time series which have been identified as leaders, coinciders, or laggards based on their general conformity to cyclical movements in aggregate economic activity.

ORDER FORM

Please enter my subscription for the publications checked below:

INTERNATIONAL ECONOMIC INDICATORS (IEI)

- ☐ Corporate @ \$300/year (U.S. and Canada)
- ☐ Foreign @ \$350/year (includes air mail)
- ☐ University or Public Libraries
- ☐ monthly @ \$150/year

IEI HISTORICAL DATA*

- ☐ Printout, all series and indexes, \$150
- ☐ Printout, indexes only, \$50
- ☐ Magnetic Tape (9 Track), all series and indexes, \$150

*Add \$30 for foreign airmail

IEIDATA is also available, on-line, through Haver Analytics time-sharing service. For more information, contact Haver Analytics, 420 Lexington Avenue, Suite 2113, New York, N.Y. 10017 (212) 986-9300.

New Features and Changes for This Issue
Summary of Current Leading and Coincident Indexes

PART I
COMPOSITE INDEXES

Leading Indexes, seven countries (Table 1).....	1
Coincident Indexes, seven countries (Table 2).....	3
Charts of Indexes and Growth Rates, 1973-83.....	5-15

PART II
COMPONENTS OF COMPOSITE INDEXES

Charts of leading series, 1980-84, seven countries.....	16-21
Charts of coincident series, 1980-84, seven countries.....	22-26
United States (12 leading, 6 coincident series).....	27
Canada (12 leading, 6 coincident series).....	31
United Kingdom (12 leading, 6 coincident series).....	35
West Germany (11 leading, 7 coincident series).....	39
France (8 leading, 5 coincident series).....	43
Italy (7 leading, 5 coincident series).....	47
Japan (10 leading, 6 coincident series).....	51

PART III
MULTICOUNTRY COMPOSITE INDEXES

Three countries excl. Europe (34 leading, 18 coincident series).....	57,59
Four European countries (38 leading, 23 coincident series).....	57,59
Six countries excl. U.S. (60 leading, 35 coincident series).....	57,59
Seven countries (72 leading, 41 coincident series).....	57,59

PART IV APPENDIXES (June & December issues)

- A. Growth cycle peak and trough dates, 13 countries
- B. Median leads and lags of individual indicator at growth cycle turning points, 10 countries
- C. Median leads and lags of composite indexes at growth cycle turning points, 7 countries
- D. Construction of composite indexes

NEW FEATURES AND CHANGES FOR THIS ISSUE

Changes are made from time to time in IEI to incorporate recent findings of the Center's international business cycle research, newly available series, and revisions made by source agencies of the Center. These changes may result in revisions of data, additions or deletion of series, changes in the composition of indexes, etc.

Note: All series are adjusted for seasonal variations unless designated NSA. Series designated quarterly (Q) are interpolated monthly with the quarterly figure placed at the mid-month of the quarter.

July 1984

THE LATEST READING OF THE INTERNATIONAL INDICATORS

Summary: The leading indicators continue to give a positive reading on the prospects for economic expansion in the seven major industrial countries. Japan's leading index in April recorded a faster growth rate, 12%, than any of the other countries. For the United States and Canada the indexes are saying slower growth ahead. Their most recent growth rates, at 7%, are about half what they were six months ago. The leading indexes for France, West Germany and Italy show advances in the 5 to 7% range, while the United Kingdom turned in a slow 2% growth rate in April. The composite indexes of economic performance, which include measures of output and employment, are now rising more slowly in the U.S. and Canada than they were six months ago, but more rapidly in Japan. For Europe, modest upswings in the performance indexes are underway except in France, where the index has remained steady in recent months.

	Ten-year Growth Rate 1969-79	Indexes of Economic Performance Growth Rates*			Leading Business Cycle Indexes Growth Rates*			Current Reading on the Cycle	Latest Month Covered
		6 mos. ago	3 mos. ago	Latest month	6 mos. ago	3 mos. ago	Latest month		
		Annual rates, percent							
United States	3	12	11	11	15	16	7	Expansion continuing	June/May
Canada	4	7	5	3	13	9	7	Expansion continuing	Apr.

ABOUT THE CENTER FOR INTERNATIONAL BUSINESS CYCLE RESEARCH

The Center for International Business Cycle Research, established in 1979, specializes in the study of trends and fluctuations in economic growth and inflation in the United States and other countries. The data contained in this publication are the result of its ongoing research programs on international business cycles. Readers are invited to submit comments and suggestions concerning this publication. In addition, readers wishing to secure historical data for the series shown may do so by communicating with:

Jean L. Maltz, Center for International Business Cycle Research,
808 Uris Hall, Columbia University, New York, NY 10027 Telephone: (212) 280-2916

ABOUT THIS REPORT

INTERNATIONAL ECONOMIC INDICATORS (IEI) provides a monthly look at 130 economic time series covering the seven major industrial countries (forty of these series are unavailable in any other source).

The basic research underlying the compilation began in 1974, under the direction of Dr. Geoffrey H. Moore and Dr. Philip A. Klein, following the methodology for selecting and evaluating indicators for the U.S. economy (published by the U.S. Department of Commerce in Business Conditions Digest). Additional indicators and other countries will be included in the compilation as the Center's research program develops.

The dominant feature of **IEI** is the composite indexes section, in which leading and coincident cyclical indexes are presented for the seven major industrial countries and for groups of countries. Studies by the Center have shown the usefulness of these cyclical indexes for forecasting, measuring and interpreting short-term fluctuations in aggregate economic activity, inflation, employment and foreign trade flows. Cyclical indicators are economic time series which have been identified as leaders, coinciders, or laggards based on their general conformity to cyclical movements in aggregate economic activity.

ORDER FORM

Please enter my subscription for the publications checked below:

INTERNATIONAL ECONOMIC INDICATORS (IEI)

- ☐ Corporate @ \$300/year (U.S. and Canada)
☐ Foreign @ \$350/year (includes air mail)
☐ University or Public Libraries
☐ monthly @ \$150/year

IEI HISTORICAL DATA*

- ☐ Printout, all series and indexes, \$150
☐ Printout, indexes only, \$50
☐ Magnetic Tape (9 Track), all series and indexes, \$150

*Add \$30 for foreign airmail

IEIDATA is also available, on-line, through Haver Analytics time-sharing service. For more information, contact Haver Analytics, 420 Lexington Avenue, Suite 2113, New York, N.Y. 10017 (212) 986-9300.

New Features and Changes for This Issue
Summary of Current Leading and Coincident Indexes

PART I
COMPOSITE INDEXES

Leading Indexes, seven countries (Table 1).....	1
Coincident Indexes, seven countries (Table 2).....	3
Charts of Indexes and Growth Rates, 1973-83.....	5-15

PART II
COMPONENTS OF COMPOSITE INDEXES

Charts of leading series, 1980-84, seven countries.....	16-21
Charts of coincident series, 1980-84, seven countries.....	22-26
United States (12 leading, 6 coincident series).....	27
Canada (12 leading, 6 coincident series).....	31
United Kingdom (12 leading, 6 coincident series).....	35
West Germany (11 leading, 7 coincident series).....	39
France (8 leading, 5 coincident series).....	43
Italy (7 leading, 5 coincident series).....	47
Japan (10 leading, 6 coincident series).....	51

PART III
MULTICOUNTRY COMPOSITE INDEXES

Three countries excl. Europe (34 leading, 18 coincident series).....	57,59
Four European countries (38 leading, 23 coincident series).....	57,59
Six countries excl. U.S. (60 leading, 35 coincident series).....	57,59
Seven countries (72 leading, 41 coincident series).....	57,59

PART IV APPENDIXES (June & December issues)

- A. Growth cycle peak and trough dates, 13 countries
- B. Median leads and lags of individual indicator at growth cycle turning points, 10 countries
- C. Median leads and lags of composite indexes at growth cycle turning points, 7 countries
- D. Construction of composite indexes

NEW FEATURES AND CHANGES FOR THIS ISSUE

Changes are made from time to time in IEI to incorporate recent findings of the Center's international business cycle research, newly available series, and revisions made by source agencies of the Center. These changes may result in revisions of data, additions or deletions of series, changes in the composition of indexes, etc.

Following Tables 1 and 2 is an article describing our new leading and coincident composite indexes for Australia.

Note: All series are adjusted for seasonal variations unless designated NSA. Series designated quarterly (Q) are interpolated monthly with the quarterly figure placed at the mid-month of the quarter.

August 1984

THE LATEST READING ON THE INTERNATIONAL INDICATORS

Summary:

For the first time in the current economic upswing, the composite leading index for the six major industrial countries outside the United States is rising faster than the U. S. leading index. The U. S. rate has slowed to 5% while the six-country rate is 7%. Japan, with an 11% growth rate, is the front runner, and the leading indexes for France, West Germany and Italy are also rising faster than the U. S. index. Canada's index is climbing at the same pace as the U. S. Only the United Kingdom's 2% is slower. The economic performance (coincident) indexes are rising slowly except in the U. S., where the slowdown in the leading index has yet to put much of a damper on the performance index.

	Ten-year Growth Rate 1969-79	Indexes of Economic Performance Growth Rates*			Leading Business Cycle Indexes Growth Rates*			Current Reading on the Cycle	Latest Month Covered

CENTER FOR INTERNATIONAL BUSINESS CYCLE RESEARCH

NEW INDEXES FOR AUSTRALIA

New business-cycle measures have been compiled for Australia, comparable to the leading indexes and economic performance indexes for the seven largest industrial countries regularly reported in the IEI. The recent behavior of these series shows that a cyclical recovery got under way "down under" in May 1983.

Measured by both the leading and performance indexes, this recovery has been quite vigorous. As the charts show, it has been more rapid than the average of four previous Australian recoveries. In addition, the indexes have been rising faster than in any of the seven countries (see table below and summary page). Recent growth rates of the leading index, moreover, suggest that further expansion of the Australian economy lies ahead.

Seven countries	3	6	7	6	May

Australia's recovery started some six months after recovery began in the United States and at about the same time as recoveries began in Japan and the United Kingdom. These are the three countries -- the first two especially in recent years -- with the closest links to Australia's trade and financial markets.

The second table lists the individual leading indicators that are combined into the composite leading indexes for Australia and its three big trading partners, showing for each series the average lead time, in months, in advance of economic downturns and upturns. These indicators represent commitments currently being made with respect to future activity -- such as applications for building permits to construct housing -- or they are factors that influence such commitments. That is why the leaders anticipate movements in the economy's

output, trade, income and employment.

As in the case of other countries, some of the Australian indicators are only roughly equivalent to those for the United States. Factory overtime is used in place of the average workweek, net demand for new telephone service in place of net business formation, and change in overdraft limits outstanding in place of change in consumer installment credit. There are also three gaps where no series is available. Nevertheless, as the table shows, the typical lead times for Australia closely resemble those for the other countries. Hence the leading index for Australia, constructed from the nine series, has given reliable early warning signals of recession and recovery since 1949, and is closely comparable with the indexes for other countries reported in the IEI.

In view of the encouraging results of the study of Australian indicators (recently completed by Professor Ernst Boehm of Melbourne University while a visiting scholar at the Center for International Business Cycle Research), the Center expects to complete arrangements soon to keep the figures up to date and report them regularly in the IEI.

MEDIAN LEADS AND LAGS OF LEADING INDICATORS
AT GROWTH CYCLE PEAKS AND TROUGHS, FOUR COUNTRIES

Indicator:	U.S. Title	Australia	United States	Japan	United Kingdom
Lead (-) or lag (+), in months

ABOUT THE CENTER FOR INTERNATIONAL BUSINESS CYCLE RESEARCH

The Center for International Business Cycle Research, established in 1979, specializes in the study of trends and fluctuations in economic growth and inflation in the United States and other countries. The data contained in this publication are the result of its ongoing research programs on international business cycles. Readers are invited to submit comments and suggestions concerning this publication. In addition, readers wishing to secure historical data for the series shown may do so by communicating with:

Jean L. Maltz, Center for International Business Cycle Research,
808 Uris Hall, Columbia University, New York, NY 10027. Telephone: (212) 280-2916

ABOUT THIS REPORT

INTERNATIONAL ECONOMIC INDICATORS (IEI) provides a monthly look at 130 economic time series covering eight major industrial countries (forty-five of these series are unavailable in any other source).

The basic research underlying the compilation began in 1974, under the direction of Dr. Geoffrey H. Moore and Dr. Philip A. Klein, following the methodology for selecting and evaluating indicators for the U.S. economy (published by the U.S. Department of Commerce in *Business Conditions Digest*). Additional indicators and other countries will be included in the compilation as the Center's research program develops.

The dominant feature of **IEI** is the composite indexes section, in which leading and coincident cyclical indexes are presented for eight major industrial countries and for groups of countries. Studies by the Center have shown the usefulness of these cyclical indexes for forecasting, measuring and interpreting short-term fluctuations in aggregate economic activity, inflation, employment and foreign trade flows. Cyclical indicators are economic time series which have been identified as leaders, coinciders, or laggards based on their general conformity to cyclical movements in aggregate economic activity.

ORDER FORM

Please enter my subscription for the publications checked below:

INTERNATIONAL ECONOMIC INDICATORS (IEI)

- ☐ Corporate @ \$450/year (U.S. and Canada)
☐ Foreign @ \$500/year (includes air mail)

University or Public Libraries
☐ monthly @ \$250/year

• IEI HISTORICAL DATA*

- ☐ Printout, all series and indexes, \$150
☐ Printout, indexes only, \$50
☐ Magnetic Tape (9 Track), all series and indexes, \$150

*Add \$30 for foreign airmail

IEIDATA is also available, on-line, through CITIBASE time-sharing service. For more information, contact CITIBASE, P.O. Box 5294, New York, N.Y. 10150 (212) 559-5312.

New Features and Changes for This Issue
Summary of Current Leading and Coincident Indexes

PART I
COMPOSITE INDEXES

Leading Indexes, eight countries (Table 1).....	1
Coincident Indexes, eight countries (Table 2).....	3
Charts of Indexes and Growth Rates, 1974-1984.....	5-15

PART II
COMPONENTS OF COMPOSITE INDEXES

Charts of leading series, 1980-84, eight countries.....	16-23
Charts of coincident series, 1980-84, eight countries.....	24-26
United States (12 leading, 6 coincident series).....	29
Canada (12 leading, 6 coincident series).....	33
United Kingdom (12 leading, 6 coincident series).....	37
West Germany (11 leading, 7 coincident series).....	41
France (8 leading, 5 coincident series).....	45
Italy (7 leading, 5 coincident series).....	49
Japan (10 leading, 6 coincident series).....	53
Australia (9 leading, 6 coincident series).....	57

PART III
MULTICOUNTRY COMPOSITE INDEXES

Four European countries (38 leading, 23 coincident series).....	63,65
Seven countries excl. U.S. (69 leading, 41 coincident series).....	63,65
Eight countries (81 leading, 47 coincident series).....	63,65

PART IV APPENDIXES (June & December issues)

- A. Growth cycle peak and trough dates, 13 countries
- B. Median leads and lags of individual indicator at growth cycle turning points, 10 countries
- C. Median leads and lags of composite indexes at growth cycle turning points, 7 countries
- D. Construction of composite indexes

NEW FEATURES AND CHANGES FOR THIS ISSUE

Changes are made from time to time in IEI to incorporate recent findings of the Center's international business cycle research, newly available series, and revisions made by source agencies of the Center. These changes may result in revisions of data, additions or deletions of series, changes in the composition of indexes, etc.

Starting this month, the new leading and coincident composite indexes for Australia, described in the August issue, are being included on a regular basis in the IEI. Consequently, the leading and coincident indexes for six countries, excluding the United States, have been replaced by indexes for seven countries, including Australia, while the leading and coincident indexes for seven countries have been replaced by indexes for eight countries. Charts and printouts of Australia's leading and coincident indexes, growth rates and component series are also included.

Note: All series are adjusted for seasonal variations unless designated NSA. Series designated quarterly (Q) are interpolated monthly with the quarterly figure placed at the mid-month of the quarter.

Summary:

In most of the major industrial countries, the current expansion is showing signs of slowing down. The most pronounced slowing is in the United States, where the growth rate of the leading index is down to 2%, only half that for the other seven countries combined. Japan continues to show the most rapid growth in its leading index (8%) though it, too, is down considerably from its high. The only country with a leading index that is underperforming the U.S. is the United Kingdom, where the business-cycle recovery has stalled, due at least in part to the continuing coal strike. The economic performance (coincident) indexes continue to rise slowly in Canada, Japan and the United Kingdom and rapidly in the U.S. where the slowdown in the leading index is only just beginning to affect performance. In Germany, where there have been strikes, and in France and Italy there is some evidence that the recovery may be in difficulty. The Australian picture, rapid expansion now beginning to slow down, appears to be following the U.S. pattern.

	Ten-year Growth Rate 1969-79	Indexes of Economic Performance Growth Rates*			Leading Business Cycle Indexes Growth Rates*			Current Reading on the Cycle	Latest Month Covered

ABOUT THE CENTER FOR INTERNATIONAL BUSINESS CYCLE RESEARCH

The Center for International Business Cycle Research, established in 1979, specializes in the study of trends and fluctuations in economic growth and inflation in the United States and other countries. The data contained in this publication are the result of its ongoing research programs on international business cycles. Readers are invited to submit comments and suggestions concerning this publication. In addition, readers wishing to secure historical data for the series shown may do so by communicating with:

Jean L. Maltz, Center for International Business Cycle Research,
808 Uris Hall, Columbia University, New York, NY 10027. Telephone: (212) 280-2916

ABOUT THIS REPORT

INTERNATIONAL ECONOMIC INDICATORS (IEI) provides a monthly look at 130 economic time series covering eight major industrial countries (forty-five of these series are unavailable in any other source).

The basic research underlying the compilation began in 1974, under the direction of Dr. Geoffrey H. Moore and Dr. Philip A. Klein, following the methodology for selecting and evaluating indicators for the U.S. economy (published by the U.S. Department of Commerce in *Business Conditions Digest*). Additional indicators and other countries will be included in the compilation as the Center's research program develops.

The dominant feature of **IEI** is the composite indexes section, in which leading and coincident cyclical indexes are presented for eight major industrial countries and for groups of countries. Studies by the Center have shown the usefulness of these cyclical indexes for forecasting, measuring and interpreting short-term fluctuations in aggregate economic activity, inflation, employment and foreign trade flows. Cyclical indicators are economic time series which have been identified as leaders, coinciders, or laggards based on their general conformity to cyclical movements in aggregate economic activity.

ORDER FORM

Please enter my subscription for the publications checked below:

INTERNATIONAL ECONOMIC INDICATORS (IEI)

☐ Corporate @ \$450/year (U.S. and Canada)

☐ Foreign @ \$500/year (includes air mail)

University or Public Libraries

☐ monthly @ \$250/year

IEI HISTORICAL DATA*

☐ Printout, all series and indexes, \$150

☐ Printout, indexes only, \$50

☐ Magnetic Tape (9 Track), all series and indexes, \$150

*Add \$30 for foreign airmail

IEIDATA is also available, on-line, through CITIBASE time-sharing service. For more information, contact CITIBASE, P.O. Box 5294, New York, N.Y. 10150 (212) 559-5312.

PART III
MULTICOUNTRY COMPOSITE INDEXES

Four European countries (38 leading, 23 coincident series).....	63,65
Seven countries excl. U.S. (69 leading, 41 coincident series).....	63,65
Eight countries (81 leading, 47 coincident series).....	63,65

PART IV APPENDIXES (June & December issues)

- A. Growth cycle peak and trough dates, 13 countries
- B. Median leads and lags of individual indicator at growth cycle turning points, 10 countries
- C. Median leads and lags of composite indexes at growth cycle turning points, 7 countries
- D. Construction of composite indexes

NEW FEATURES AND CHANGES FOR THIS ISSUE

Changes are made from time to time in IEI to incorporate recent findings of the Center's international business cycle research, newly available series, and revisions made by source agencies of the Center. These changes may result in revisions of data, additions or deletions of series, changes in the composition of indexes, etc.

Special Note

Owing to a computational error, the leading and economic performance indexes for Australia have been substantially revised. The new indexes show smaller cyclical swings and are comparable in this respect with the indexes for other countries. The revised growth rates for Australia do not reach as high a level in expansions or as low a level in recessions as the previous figures showed.

Note: All series are adjusted for seasonal variations unless designated NSA. Series designated quarterly (Q) are interpolated monthly with the quarterly figure placed at the mid-month of the quarter.

October 1984

THE LATEST READING ON THE INTERNATIONAL INDICATORS

Summary:

Australia is clearly the front-runner among the eight industrial countries, with a 10% annual growth rate in its leading index, and 11% in its performance index. In the United States, Canada, and Japan the leading indexes are signaling slower growth rates ahead, but expansion is continuing. The latest performance index growth rates are 8% for the U.S., 6% for Canada, and 4% for Japan. In Europe, Italy's indexes show that recovery may have started last spring, but in the United Kingdom, West Germany and France the recovery seems to be stalling.
